

## Movies App Challenge

The goal of this challenge is to build a simple app using [themoviedb.org](https://themoviedb.org) API.

### Problem

Build a UI that lets a user search for a movie and display the results in a list. When clicking on a list item, a page showing some details about the movie should be displayed. Everything else is up to you.

Here is a wireframe example of what is expected:

### Instructions

Create an account on [themoviedb.org](https://themoviedb.org) to get an API key.

You are free to create a react native project from scratch, or use a tool like [expo.io](https://expo.io) to save time.

You are free to use any tool or library you feel comfortable with.

Suggested reading:

- <https://themoviedb.org/>
- <http://docs.themoviedb.apiary.io/>
- <https://github.com/cavestri/themoviedb-javascript-library/> (for reference only, do not use this library in your solution)

Your solution should be provided as git repository or archive containing the source code with no binaries. It should be buildable/testable/viewable with simple steps.

Please try to follow industry best practices and techniques such as unit testing, documentation, etc.

**Good luck and have fun!**
